INDUSTRIAL SEALING SOLUTIONS

Gaskets, sealing materials and custom-made components for industrial applications

TECHNICAL PRODUCT CATALOGUE

ANBI-TECH Sp. z o.o. | Olkusz, Poland | 09.2026

SEALING SOLUTIONS FOR INDUSTRY

ANBI-TECH supplies technical gaskets and sealing materials for industrial applications. The range covers standard formats and components prepared to drawing, with material selection based on the operating medium, temperature, pressure and flange conditions.

01 TECHNICAL SELECTION

Material and construction are selected for the operating conditions and the required standard.

02 CUSTOM-MADE PARTS

Gaskets and sealing components can be prepared from drawings, models or complete dimensional documentation.

03 DOCUMENTATION

Available documentation is agreed for the product and application at the quotation stage.

04 DELIVERY SCOPE

The scope may include machining, cutting, inspection and coordinated external processes.

TYPE	SECTION	APPLICATION	MAX DIAMETER (mm)	MAX THICKNESS (mm)	MAX OPERATING PRESSURE (bar)	MAX OPERATING TEMPERATURE (°C)	PG. NR.
MS10		valve bonets, stoppers for boilers	2200	2.5 ÷ 7.2	400	550	4
MS12		for high pressures, turbolences	2200	3.2 ÷ 7.2	400	550	4
MS14		for high pressures	2200	3.2 ÷ 7.2	400	550	4
MS16		for high pressures, turbolences	2200	3.2 ÷ 7.2	400	550	4
MS10T		gasket with sealing zone of PTFE	2200	3.2 ÷ 4.5	400	250	4
C		flange male-female	200	1.5 ÷ 5	100	550	10
MP10		heat exchangers, steam and fluid seal	4000	2 ÷ 10	100	550	10
MP10A		heat exchangers, steam and fluid seal	4000	3 ÷ 5	100	550	10
MP12		big flanges, not ideal flat	4000	2 ÷ 10	100	550	10
MP14		heat exchangers, steam and fluid seal	4000	2 ÷ 10	100	550	10
MP16		gas and vapor seals	4000	2 ÷ 5	100	550	10
MP18		gas and vapor seals	4000	2 ÷ 5	100	550	10
MP19		valve covers and vacuum seals	4000	2 ÷ 4	100	550	10
MP22		steam (vapor) and fluid seals	2000	2 ÷ 5	100	700	10
M7A		power plants, manhole, heat exchangers	3000	2.5 ÷ 6	400	700	16
M7B		power plants, manhole, heat exchangers	3000	2.5 ÷ 7	400	700	16
M7C		power plants, manhole, heat exchangers	3000	2.5 ÷ 8	400	700	16
M7E		power plants, manhole, heat exchangers	3000	2.5 ÷ 9	400	700	16
M10		power plants, manhole, heat exchangers	3000	0.2 ÷ 3	400	550	16
M10A		power plants, manhole, heat exchangers	3000	2 ÷ 6	400	550	16
M14		air and gas compressor	1000	30	160	500	20
M15-R		high temperature and pressure	1000	11.18 ÷ 44.45	700	1000	20
M16-R		high temperature and pressure	1000	9.65 ÷ 41.4	700	1000	20
M17-L		check valves, high temperature	1000	8 ÷ 50	320	600	20
M18-RX		high temperature and pressure	600	19.05 ÷ 25.4	700	1000	20
M19-BX		high temperature and pressure	850	9.30 ÷ 39.84	1500	1000	20
MW12		low pressure applications, space limitation	2000	1.2 ÷ 1.5	50	550	23
MW12A		low pressure applications, higher temperatures, gas ducts	2000	3 ÷ 5	50	550	23
MW12AE		low pressure applications, higher temperatures, gas ducts	2000	4 ÷ 5	50	550	23
MW13A		low pressure applications, higher temperatures, gas ducts	2000	4 ÷ 5	50	550	23
MW13AE		low pressure applications, higher temperatures, gas ducts	2000	4 ÷ 5	50	550	23
MW22A		flanges with large diameters, process industry	4000	8 ÷ 12	50	550	23
MW23A		flanges with large diameters, process industry	4000	8 ÷ 12	50	550	23
MW12C		flanges with large diameters, process industry	2000	5 ÷ 8	50	550	23
BA10		all common applications	1500	1.5 ÷ 3	100	250	26
MP1		good resistance to erosion	1500	1.5 ÷ 3	150	450	33
MP1		good resistance to erosion	1500	1.5 ÷ 3	250	450	33
TF02÷TF040		high chemical stability, good resistance to aggressive chemicals	800	2 ÷ 10	50	250	35

Temperature and pressure represent maximum values and should not be used simultaneously. They are given only as guidance, since they depend not only on the type of gasket material but also on the assembly conditions. Very important factors are nature of service medium, type of flange, surface pressure and others. Given values are recommended for typical flange gaskets constructions. Max. parameters can be changed by using special materials.

SPIRAL WOUND GASKETS

PROPERTIES AND APPLICATIONS

Spiral wound gaskets are special semi-metallic gaskets of great resilience, therefore they are very suitable for applications featuring heavy operating conditions. Spiral wound gaskets are manufactured by spirally winding a V-shaped metal strip and a strip of non-metallic filler material. The metal strip holds the filler, providing the gasket with mechanical resistance and resilience. Spiral wound gaskets can be reinforced by an outer centering ring and/or inner retaining ring. The outer centering ring controls the compression and holds the gasket centrally within the bolt circle. The inner retaining ring increases the axial rigidity and resilience of the gasket. Spiral wound gaskets should always be in contact with the flange and should not protrude into the pipe or project from the flange. They can be used for sealing flange joints, manhole and handhold covers, tube covers, boilers, heat exchangers, pressure vessels, pumps, compressors and valves; in industries such as petrochemical, pharmaceutical, shipbuilding, and food processing, in power industries and nuclear power stations. They are ideal for sealing steam, oil, liquids, gases, acids, alkalines, various organic media and solvents.

ADVANTAGES

Sealing under heavy operating conditions. Strong stress compensation, stable and reliable sealing performance even under frequent pressure fluctuation conditions. Solid construction provides stability and sealability even when the sealing surfaces are slightly corroded or bent. Easy installation.

SHAPE AND CONSTRUCTION

Spiral wound gaskets are produced in several types and combination of materials to fit the most stringent application. Spiral wound gaskets are usually of circular shape, however we can produce them in other shapes such as: oval, rectangular, with round corners, etc. Our standard production program comprises a range of spiral wound gaskets with inner diameters of 10 mm to 3000 mm and a nominal thickness of 3.2 mm, 4.5 mm and 6.5 mm. Spiral wound gaskets of non-standard dimensions and shapes, and larger diameters are available on request.

GASKET STANDARD TYPES

- Gaskets without centering and inner ring (Type MS10)
- Gaskets without centering and inner ring (Type MS10T)*
- Gaskets with inner ring (Type MS12)
- Gaskets with centering (outer) ring (Type MS14)
- Gaskets with centering and with inner ring (Type MS16)

*With PTFE sealing zone

SPIRAL WOUND GASKETS

Metallic strip

Standard thickness of the metallic strip is 0.2 mm.

MATERIALS FOR METALLIC STRIP	
ASTM	EN Material No.
AISI 304	1.4301
AISI 309	1.4828
AISI 316, AISI 316L	1.4401, 1.4404
AISI 316Ti	1.4571
AISI 321	1.4541
Monel (NiCu30Fe)	2.4360

Other alloys available on request.

Filler

- Filler is normally used for thicknesses from 0.5 mm to 0.6 mm.
- Flexible graphite 98%
- Flexible graphite 99.85%
- PTFE, E-PTFE
- Mica

Centering ring

The centering ring does not come into direct contact with contained fluid. It is normally made of carbon steel and electroplated or painted to avoid corrosion. Other materials are available on request.

Inner ring

The inner ring is used to avoid excessive compression due to high seating stress in high-pressure service and it is also used to reduce turbulence in the flange area. It is normally made of the same material as the gasket metallic strip.

DIMENSIONS

Limitations for manufacturing of dimensions are general and can vary according to the special customer requirements.

LIMITATIONS FOR MANUFACTURING DIMENSIONS			
Thickness [mm]	Max diameter d_3 (mm)	Maximum width - b_g (mm)	
		Graphite	PTFE
2.5	300	16	13
3.2	700	22	19
4.5	1500	30	24
6.5	2300	35	24
7.2	2300	30	24

Thickness

The standard manufacturing thicknesses for spiral wound gaskets are: 3.2 mm, 4.5 mm and 6.5 mm (measured across metallic strip not including the filler, which protrudes 0.2-0.3 mm beyond the metal).

Manufacturing tolerances

The tolerance of the gasket diameters (d_1 , d_2 , d_3 , d_4 , s , s_1 , s_2) are stipulated by ASME B16.20 and EN 1514-2 standards. The gaskets designed for non-standard flanges meet the recommendations by the ASME B16.20.

Dimensions

The dimensions of the standard SWG meet the ASME, BS, DIN and EN standards.

SPIRAL WOUND GASKETS

LOAD BEARING GASKETS

Gasket compression

Spiral wound gaskets shall be designed in such a way that a uniform bolt stress, based on the nominal root diameter, will compress the gasket to a thickness (e).

STANDARD GASKET COMPRESSION			
s	3.2	4.5	6.5
e	2.5 ^{+0.1}	3.3 ^{+0.1}	4.7 ^{+0.1}

Connections with non-load bearing gaskets

Since no standards exist as yet for the use of spiral-wound gaskets in non-load-bearing connections, the application of guidelines from the adjacent table is recommended.

Gaskets and grooves dimensions

SPIRAL WOUND GASKET				GROOVE

< 300	3.2	5-9	d _g +b _g	d _g -b _g	d ₃ +1	b _g /0.86	d _{NO} -2b _N	2.5 ^{+0.1}
< 1000	3.2	9-17	d _g +b _g	d _g -b _g	d ₃ +1.5		d _{NO} -2b _N	2.5 ^{+0.1}
< 300	4.5	5-9	d _g +b _g	d _g -b _g	d ₃ +1		d _{NO} -2b _N	3.3 ^{+0.1}
< 1000	4.5	9-17	d _g +b _g	d _g -b _g	d ₃ +1.5		d _{NO} -2b _N	3.3 ^{+0.1}

b_g - gasket width
b_N - groove width

SPIRAL WOUND GASKETS

All standard and non-standard types can be delivered in non-standard dimensions according to customer request.

EN 1092 and ASME B16.5 TONGUE and GROOVE flanges meet SWG dimensions according to ASME B16.20 or other customer request.

EN 1092 and ASME B 16.5 MALE and FEMALE flanges meet SWG dimensions according to ASME B 16.20 or other customer request.

NON-STANDARD SWG

Gaskets for boilers handholes and manholes

Gaskets Type MS10 can be manufactured in other shapes like oval and oblong. There is no specific standard for this type of gasket. When ordering, complete specifications must be provided: inner dimensions (AxB), width (b) and thickness (s) or a drawing.

GASKET ORDERING EXAMPLE - ASME

Type, STANDARD, DN, PN.

Specify also material combinations and design required.

Design: SWG MS16, 2" / 300 lbs, ASME B16.20 for ASME B16.5

Winding and inner ring material: AISI 304

Filler material: Graphite 98% purity

Centering ring: CS

Oval shape

GASKET ORDERING EXAMPLE - EN

Type, STANDARD, DN, PN.

Specify also material combinations and design required.

Design: SWG MS16, DN 80 / PN 16, EN 1514-2

Winding and inner ring material: Stainless steel 1.4301

Filler material: Graphite 98% purity

Centering ring: CS

Oblong shape

GASKET ORDERING EXAMPLE - CUSTOM SIZE

Type, STANDARD, d1, d2, d3, d4

Specify also material combinations and design required.

Design: SWG MS16, Ø1620/Ø1646/Ø1684/Ø1724

Winding and inner ring material: Stainless steel 1.4301

Filler material: Graphite 98% purity

Centering ring: CS

METAL-JACKETED GASKETS

PROPERTIES AND APPLICATIONS

Metal-jacketed gaskets are particularly suitable for sealing flat surfaces of heat exchangers, gas pipes, cast iron flanges, autoclaves and similar. By their sealing efficiency, provided by exerting strong pressure on circular rims of the flanges, metal-jacketed gaskets can stand up to 30% deviation from the initial thickness, which is very useful in case of irregular or faulty flange rims. The chemical compatibility of the metal and the medium being sealed should be considered.

ADVANTAGES

Suitable for high assembly stress.
Highly resistant against blow-out.

SHAPE AND CONSTRUCTION

Metal-jacketed gaskets are produced in several types to meet the requirements of the most demanding applications. Inside a metallic jacket they feature a soft filler as shown in the figure.

Metallic Material

Material	ASTM	EN Material No.
Carbon steel	CS	1.0038 [DC04 St14]
Stainless steel	AISI 304	1.4301
Stainless steel	AISI 309	1.4828
Stainless steel	AISI 316, 316L	1.4401, 1.4404
Stainless steel	AISI 316Ti	1.4571
Stainless steel	AISI 321	1.4541
Monel (NiCu30Fe)	Alloy 400	2.4360
Copper	Copper	2.0090
Brass	Brass Ms 63	2.0321

The metallic jacket is normally 0.4 mm thick. Other materials are available on customer request.

Filler

The standard filler material is flexible graphite.
Other fillers like ceramic, mineral or other can be also used.

SIZE

The metal jacketed gaskets come in sizes according to EN 1514-4 or ASME B16.20 standards.

Maximum size:

Outer diameter: up to 4000 mm
Thickness: from 2 to 10 mm

GASKET ORDERING EXAMPLE

STANDARD DIMENSION

Metal-jacketed gasket MP10,
ASME B 16.20, 8" / 600 lbs,
Material: AISI 304,
Filler: Graphite

NON-STANDARD DIMENSION

Metal-jacketed gasket MP10,
D = 836 mm, d = 804 mm, s = 3.2 mm,
Material: Cu,
Filler: Ceramic

GASKETS FOR HEAT EXCHANGERS

PROPERTIES AND APPLICATIONS

Heat exchanger gasket is a term that has been given to gaskets used in heat exchangers. The structure of the gasket or its type varies according to the operating conditions of the exchangers. The heat exchanger gaskets come in a wide spectrum of types including single or double-jacketed, corrugated, plain metal, soft and many others. A large selection of different materials allows heat exchangers to operate at temperatures beyond the capabilities of most soft gasket materials.

METAL-JACKETED GASKETS FOR HEAT EXC.

ADVANTAGES

- Available in wide range of materials, since they are all custom made. There are few limitations regarding size and shape.
- The metal jacket provides mechanical strength to contain the filler and improves chemical resistance.
- Unique construction provides stability and ensures trouble-free handling and installation.

SHAPE AND CONSTRUCTION

These gaskets are used in shell and tube type heat exchangers. They can be manufactured in very different sizes, shapes, with or without bars. The primary seal is at the inner diameter of the gasket, the outer gasket diameter acts as a secondary seal. The bars seal between the heat exchangers passages.

The heat exchanger gaskets are produced in several types to meet the most demanding applications. Gaskets for heat exchangers can be manufactured in metal or alloy with a thickness 0.4 mm featuring a soft core inside a metallic jacket.

Gaskets with integrated bars

Traditionally double-jacketed gaskets for heat exchangers are manufactured with integrated bars. There is a radius between the bars and an internal diameter of the gaskets.

The values of the corresponding radius for the most commonly used metals and alloys are shown in the following table. If a radius is less than R_{min} , the material can crack, reducing the sealing properties of the gaskets.

GASKET MATERIALS and R_{min}	
Gasket material	R_{min}
Copper	8 mm
Soft iron	8 mm
Carbon steel	8 mm
Brass, Monel	10 mm
Stainless steel	10 mm

GASKETS FOR HEAT EXCHANGERS

Gaskets with welded bars

Gaskets with welded bars have eliminated one of the greatest problems of conventional gaskets, namely cracks in the radius area. Metal or alloys are commercially available in sheets or rolls of 1000 mm width.

The primary and secondary seals are continuous all around the gasket. The gasket has excellent sealability, reducing leaks to the environment. The bars which seal between the heat exchangers passages are plasma or TIG welded with spot welds at each end. These welds should be soft and small to avoid areas of increased resistance to seating.

MP10 WITH WELDED BAR

Materials for heat exchanger gaskets

The selection of the jacket material depends on operating conditions. The standard filler is flexible graphite.

Metallic jacket

MATERIAL	ASTM	EN Material No.
Low carbon steel	CS	1.0038 (DC04 St14)
Stainless steel	AISI 304	1.4301
Stainless steel	AISI 309	1.4828
Stainless steel	AISI 316, AISI 316L	1.4401, 1.4404
Stainless steel	AISI 316Ti	1.4571
Stainless steel	AISI 321	1.4541
Monel (NiCu30Fe)	Alloy 400	2.4360
Copper	Copper	2.0090
Brass	Brass Ms 63	2.0321
Titanium	Titanium GR2	1.4462

Other alloys available on request.

Filler

Flexible graphite, ceramic, calandered sealing materials.

SIZES

STANDARD DIMENSIONS	
Gasket thickness	3.2 mm
Gasket width	10, 13 and 16 mm
Bar width	8, 10 and 13 mm

Gaskets with outer diameter to 1000 mm are normally made with integrated bars. Gaskets with an outer diameter greater than 1000 mm are normally made with welded bars. According to the heat exchangers shapes and sizes other dimensions can be manufactured on request.

GASKET ORDERING EXAMPLE

Gasket type (MP10, MP14), shape drawing dimensions: outer diameter D , inner diameter d , gasket thickness s , bar width w , radius R and distance between bars $\{A, B\}$.
Material for metal jacket, material for filler.

MP10

GASKETS FOR HEAT EXCHANGERS

SPIRAL WOUND GASKETS FOR HEAT EXCHANGERS

The spiral wound gaskets of MS10, MS12, MS14 or MS16 type can be manufactured with one or more metal-jacketed bars (profile MP10) in different shape shown in drawing. Metal-jacketed bars are welded and made of the same material as the spiral windings. The standard thicknesses are 3.2 mm, 4.5 mm, 6.5 mm and 7.2 mm.

MAX. DIMENSIONS	
Thickness s (mm)	Max. diameter d ₃ (mm)
3.2	750
4.5	1500
6.5	2300
7.2	2300

METALLIC MATERIALS		
Material	ASTM	EN Material No.

SWG, type MS212,
metal-jacketed profile (MP10),
material: AISI 316L/flexible graphite,
shape drawing with dimensions

GROOVED GASKETS

PROPERTIES AND APPLICATIONS

The grooved gasket is the preferred gasket solution when improved performance at low seating stresses is required. It features excellent anti-blow-out properties. A tighter joint is provided with reliable solid metal to metal seal combined with a soft sealing face. Metal gaskets with grooved faces have proven to be very effective for sealing flange connections, and they are particularly suitable for applications where high temperatures, pressures and fluctuating conditions are encountered. Non-metallic cover layers ensure that flanges are not damaged, even at extreme loads, and that they provide excellent sealing properties when supported by the grooved metallic gasket. The grooved gasket can be used as an alternative for applications associated with jacketed gaskets (for heat exchangers, vessels and reactors and various flanged connections).

ADVANTAGES

Capable of sealing pressures exceeding 250 bar.
Capable of withstanding temperatures up to 700 °C.
Particularly effective in maintaining performance under condition of fluctuating temperatures and pressures.
Solid construction provides stability even for large diameters and ensures trouble-free handling and installation.
Gaskets can be fitted to existing assemblies without modification.

SHAPE AND CONSTRUCTION

The grooved gaskets are produced in several types to fit the most demanding applications.

Metal core material

METAL CORE MATERIAL		
Material	ASTM	EN Material No.
Stainless steel	AISI 321	1.4541
Stainless steel	AISI 316Ti	1.4571
Stainless steel	AISI 304	1.4301
Stainless steel	AISI 316L	1.4404

SIZES

Upon request the grooved gaskets can be manufactured in various shapes and sizes.

Grooved gasket M7A, fine profile
 EN 1514-6, DN 80 / PN 40,
 material: 1.4541/Graphite 99.85% purity

RING JOINT GASKETS

PROPERTIES AND APPLICATIONS

The metallic ring joint gaskets are manufactured according to the API 6A and ASME B16.20 standards for application at elevated temperatures and pressures. The small sealing area with high contact pressure results in great reliability. The contact surfaces of the gaskets and flange should be carefully processed. Some types of ring joints are pressure activated, which means, the higher the pressure the better the sealability.

ADVANTAGES

The metal ring joint gaskets have been designed to withstand exceptionally high assembly loads over a small area, thus producing high seating stresses.

SHAPE AND CONSTRUCTION

The ring joint gaskets are produced in several shapes and sizes to meet the most demanding applications.

STANDARD MATERIALS

CORRUGATED METAL GASKETS

PROPERTIES AND APPLICATIONS

Corrugated gaskets without layer

There are different types of metal gaskets, like flat, grooved, tongue and sectional ones. They are used where compressibility (elasticity) of sealing material is not required. The construction of such gaskets based on the principle of different hardness of adjacent materials. These gaskets come in various shapes and there are almost no limits concerning their size. The corrugated metal gaskets have been proven to be both reliable and cost-effective for the application on flanges and heads where bolt loading is sufficient. Their operation principle is based on different degrees of hardness of adjacent materials. The sealing effect is produced by the constant load to which a gasket is exposed. They are used in applications, which require mechanical strength and thermal conductivity, as well as temperature and corrosion resistance. They are particularly useful when compressibility is not a factor and where sufficient clamping force is available. Metal gaskets feature greater mechanical strength, better heat transfer and resistance to higher temperatures and pressures, and can offer advantages over the clad type gaskets in certain applications.

Corrugated gaskets with soft layer

Corrugated metal is covered with graphite, ceramic or PTFE layers. An additional finishing layer is applied depending on the requirements of the medium to be sealed. Such gaskets are used on uneven or distorted sealing surfaces, where more elastic materials with better sealing performance are needed. The corrugated metal gaskets with soft layer on both sides are used in low-pressure applications in large diameter flue gas ducts at high temperatures. The use of corrugated gaskets eliminates the problem of difficult handling with large non-metal gaskets used in those applications. They are suitable for gas pipes and valve caps, or wherever acids, oils and chemicals are found. They can be used at lower pressures and higher temperatures.

CORRUGATED METAL GASKETS

ADVANTAGES

- Outstanding mechanical strength and thermal conductivity.
- Capable of withstanding high temperatures.
- There are almost no limitations regarding size.
- Solid construction provides stability even for large diameters and ensures trouble-free handling and installation.

SHAPE AND CONSTRUCTION

The metal gaskets are produced in several types to meet the most demanding applications. Shapes: round, oval, rectangular etc.

Type: AxBxb (oval)

SIZE

Gaskets with an outer diameter up to 1000 mm are usually made in one piece, while larger dimensions are welded. Welding is also recommended for cost-effectiveness.

Profile

The metal is 0.5 mm thick and the corrugation pitch is 3 mm, 4 mm, 5 mm or 6 mm depending on the width and size of the gaskets. The thickness of corrugation is approx. 1 mm to 1.5 mm, depending on gasket size. Corrugated metal is covered with graphite, ceramic or PTFE layers in thickness 0.5 mm to 2 mm.

GASKET ORDERING EXAMPLE

STANDARD SIZE:

CORRUGATED GASKET MW12A, EN 1514-4, DN 100 / PN 40,
material: 1.4571/Graphite 99.85% purity

NON-STANDARD DIMENSION:

CORRUGATED GASKET MW12A, D=946 mm, d=914 mm, s=3.5 mm,
material: AISI 316Ti/Graphite 99.85% purity

METAL EYELETED FLAT GASKETS

PROPERTIES AND APPLICATIONS

The metal eyeleted flat gaskets offer special protection against blowout for the sealing of critical or dangerous media. The sealing insert is usually made from TESNIT BA or Grafilit gasket material. The standard metal jacket is formed with an austenitic stainless steel leaf with a thickness 0.15 mm - 0.2 mm U-shaped and pressed in such a way that it becomes a single body with a base seal. The good malleability grade of the austenitic stainless steel gives the covering excellent mechanical properties and good resistance to erosion, while the well-known resistance to heat and corrosion ensures a long working life for the seal.

ADVANTAGES

- Blow out protection.
- Protection against chemical attack.
- Improved sealability due to the local higher stress under eyelet.

SHAPE AND CONSTRUCTION

Gaskets are available according to EN 1514-1, ASME B16.21 and other Standard Forms. Custom made gaskets are available upon request.

SIZE

The only limitation of the eyeleted gasket is the size of the basic gasket material.

Size limitations:

From 20 mm to 400 mm one piece eyelet.

From 400 mm upwards plasma welded eyelet.

The standard production follows the sizes and norms by ASME B16.21 and EN 1514-1.

GASKET ORDERING EXAMPLE

EN 1514-1, DN65 / PN 16, Form IBC,
material: TESNIT BA-U, 2 mm, eyelet AISI 316

MP1

PTFE GASKETS

PROPERTIES AND APPLICATIONS

PTFE gaskets are one of the most suitable types of gaskets for a variety of sealing applications and are mostly based on virgin PTFE or filled PTFE. PTFE gaskets provide an extensive range of applications. PTFE is a fluoropolymer, which features an outstanding chemical resistivity to almost all chemicals, good thermal insulation properties, and useful mechanical and processing characteristics. The above-mentioned PTFE features can be usefully applied in PTFE gaskets. They can be mostly used in valve seats, bearings, requested to resin sliding and chemicals, elastic band for un-lubricated compressors, O-rings where elastomers are not durable. In addition, an extended range of improved mechanical and processing properties can be achieved by combining virgin PTFE with different fillers. Different combinations offer a variety of different properties as described in the following table.

Filler	Improved properties
Glass	• enhanced wear resistance • chemical resistance
Graphite	• extremely low coefficient of friction • fairly good compressive strength • good wear resistance
Carbon	• good thermal resistance • resistance to deformation
Bronze	• enhanced compressive strength • good wear resistance • high thermal conductivity

Expanded PTFE gaskets and seal materials consist of virgin PTFE with multidirectional fibrous and/or porous structure, which the extruded PTFE consists of. A special manufacturing process provides the material with special chemical and physical properties. This can be of advantage in a wide range of applications.

ADVANTAGES

Virgin PTFE, PTFE compounds and expanded PTFE offer a wide range of compounded products with good mechanical properties, electrical properties, thermal properties, chemical resistance, low friction coefficient and good resistance to wear.

SHAPE AND CONSTRUCTION SIZE

Several types of PTFE gaskets are produced to meet the most demanding application.

MATERIALS

The range includes virgin PTFE and selected PTFE compounds for RAM extrusion and compression moulding. Material selection depends on the medium, temperature, pressure and required mechanical properties.

SIZE

SIZE limitations: each piece can feature a maximum external diameter of up to 1000 mm.

GASKET ORDERING EXAMPLE

EN 1514-1, DN 65 / PN 16,
Form IBC (virgin PTFE), 2 mm

STANDARDS FOR PTFE GASKETS USED WITH FLANGES	
Gasket standard	Flange standard
EN 1514-1	EN 1092-1, -2, -3, -4, EN 545, EN 598, EN 969

PTFE ENVELOPED GASKETS

PROPERTIES AND APPLICATIONS

The sealing insert is made of corrugated stainless steel, soft non-asbestos material, or rubber and different combinations. This insert is coated with PTFE and open on one side, usually on the outer. Thanks to their high chemical stability, good mechanical properties and permanent resistance in the atmosphere (to humidity, gasses, temperature changes) they are suitable for all types of gaskets and different media, mostly for aggressive chemicals.

ADVANTAGES

Benefits from the high stability of C-F bond virgin PTFE, which is used for the envelope and exhibits extraordinary chemical resistance. Combinations of two or more insert materials allow a large number of different applications.

SHAPE AND CONSTRUCTION

The PTFE enveloped gaskets are produced in several types to meet the most demanding applications. Standard shapes are round or oval.

Enveloped material: Virgin PTFE

Base materials: stainless steel, non-asbestos material, rubber ...

SIZE

The PTFE envelope for gaskets with maximum external diameter of up to 500 mm are made in one piece, for gaskets with greater diameters they are welded. Oval shapes of PTFE envelopes are welded. There are no limitations regarding sizes for gaskets with welded envelopes.

EN 1514-3:1997 Non-metallic PTFE envelope gaskets

(and combinations)

SPECIAL GASKETS AND CUSTOM MADE GASKETS

PROPERTIES AND APPLICATIONS

ANBI-TECH supplies standard and custom-made gaskets for industrial applications. Products can be prepared according to technical drawings and operating requirements. The final construction, material and dimensions are selected for the medium, temperature, pressure and flange conditions.

ADVANTAGES

- Custom made gaskets according to customer specifications.
- Special large single piece gaskets up to 4000 mm in size.
- Unique and strong construction allows easy handling and transport.
- High temperature resistance up to 700 °C (depends on material).
- Capability to compensate for irregularities on flanges.

SHAPE AND CONSTRUCTION

Custom-made gaskets are made to customer's own drawing and specification, samples and templates. A highly skilled hardworking team can provide for almost any customer requirements.

DIMENSION

Up to 4000 mm, according to customers specification.

GASKET ORDERING EXAMPLE

According to customer specification.

Chlorine, Cl ₂ , dry									Nitric acid, HNO ₃ , crude								
Chlorine, Cl ₂ , wet									Nitric acid, HNO ₃ , diluted								
Oxygen, O ₂ , at temp. below 260°C									Nitric acid, HNO ₃ , concentrated								
Oxygen, O ₂ , at temp. between 260°C and 535°C									Ethyl acetate, CH ₃ COOC ₂ H ₅								
Oxygen, O ₂ , at temp. over 535°C									Ethyl cellulose								
Creosote									Ethylene chloride, (CH ₂ Cl) ₂								
Oxide, cold									Ethylene glycol, (CH ₂ OH) ₂								
Ozone, O ₃									Phenol, C ₆ H ₅ OH								
Steam, at temp. below 260°C									Formaldehyde, HCHO								
Steam, at temp. between 260°C and 535°C									Phosphoric acid, H ₃ PO ₄								
Steam, at temp. over 535°C									- with concentr. below 45%								
Gas, lean									- cold, concentr. over 45%								
Gas, natural									- hot, concentr. over 45%								
Gas, coke gas									Hydrofluoric acid, HF								
Hydrogen (gas), H ₂ , cold									- cold, concentr. below 65%								
Hydrogen (gas), H ₂ , hot									- cold, concentr. over 65%								
Air									- hot, concentr. below 65%								
Mercury, Hg									- hot, concentr. over 65%								
Sulphur, S									Glycerine, C ₃ H ₈ (OH) ₃								
Sulphur chloride, S ₂ Cl ₂									Glucose								
BASES, ACIDS AND INORGANIC SALTS									Potash, K								
Aluminium fluoride, AlF ₃									Potassium cyanide, KCN								
Aluminium chloride, AlCl ₃									Potassium chloride, KCl								
Al-sulphate, Al ₂ (SO ₄) ₃									Potassium sulphate, K ₂ SO ₄								
Ammonia vapour, NH ₃ , cold									Stannic chloride, SnCl ₄								
Ammonia vapour, NH ₃ , hot									Chloroacetic acid, CH ₂ ClCOOH								
Ammonium monobas. phosph.(NH ₄) ₂ HPO ₄									Cresylic acid								
Ammonium dibasic phosph.(NH ₄) ₂ HPO ₄									Magnesium hydroxide, Mg(OH) ₂								
Ammonium tribasic phosph.(NH ₄) ₃ PO ₄									Magnesium chloride, MgCl ₂								
Ammonium hydroxide, NH ₄ OH									Magnesium sulphate, MgSO ₄								
Ammonium chloride, NH ₄ Cl									Methyl alcohol, CH ₃ OH								
Ammonium nitrate, NH ₄ NO ₃									Sodium cyanide, NaCN								
Ammonium sulphate, (NH ₄) ₂ SO ₄									Sodium phosphate, Na ₃ PO ₄ ·12H ₂ O, monobasic								
Barium hydroxide, Ba (OH) ₂									Sodium phosphate, Na ₂ HPO ₄ , dibasic								
Barium chloride, BaCl ₂									Sodium phosphate, NaH ₂ PO ₄ , tribasic								
Barium sulphide, BaS									Sodium hydroxide, NaOH								
Borax, Na ₂ B ₄ O ₇ · 10H ₂ O									Sodium hypochlorite, NaOCl								
Boric acid, H ₃ BO ₃									Sodium carbonate, Na ₂ CO ₃								
Bromidic acid, HBr									Sodium chloride, NaCl								
Hydrocyanic acid, HCN									Sodium metaphosphate, NaPO ₃								
Fluosilicic acid									Sodium nitrate, NaNO ₃								
Phosphoric acid, H ₃ PO ₄ , crude									Sodium perborate, NaBO ₃ · 4H ₂ O								
Alum, KCr (SO ₄) ₂ · 12H ₂ O									Sodium peroxide, Na ₂ O ₂								
Calcium bisulphite, Ca (HSO ₃) ₂									Sodium silicate, Na ₂ SiO ₃ · K ₂ SiO ₃								
Calcium hydroxide, Ca (OH) ₂									Sodium sulphate, Na ₂ SO ₄								
Calcium hypochlorite, CaOCl ₂ · 4H ₂ O									Sodium sulphite, Na ₂ SO ₃								
Calcium chlorite, CaCl ₂									Sodium thiosulphate, Na ₂ S ₂ O ₃								
Chromic acid, H ₂ CrO ₄									Nickel sulphate, NiSO ₄								
Carbon bisulphide, CS ₂									SIMPLE AND COMBINED ALIPHATIC HYDROCARBONS								
Hydrochloric acid, HCl, below 65°C									Acetylene, C ₂ H ₂								
Hydrochloric acid, HCl, over 65°C									Butane, C ₄ H ₁₀								
Iron chloride, FeCl ₃									Freon, CHClF ₂								
Iron sulphate, Fe ₂ (SO ₄) ₃									Methyl chloride, CH ₃ Cl								
FUELS, FLUIDS, LUBRICANTS									Lactic acid, CH ₃ CHOHCOOH, cold								
Asphalt									Lactic acid, CH ₃ CHOHCOOH, hot								
Petrol, with sulph. compounds									Formic acid, HCOOH								
Petrol, refined									Acetic acid, CH ₃ COOH, unrefined								
Benzoline									Acetic acid, CH ₃ COOH, pure								
Cellulose paints and solvents									Acetic acid, CH ₃ COOH, vapour								
Ether, C ₂ H ₅ OC ₂ H ₅									Acetic acid, CH ₃ COOH at 10 bar and 200°C								
Vinegar, CH ₃ COOH, 5%									Oxalic acid, (COOH) ₂								
Milk									Oleic acid, C ₁₇ H ₃₃ COOH								
Naphta									Palmitic acid, C ₁₅ H ₃₁ COOH								
Fuel oil									Molten picric acid, (NO ₂) ₃ C ₆ H ₂ OH								
Linseed oil									Aqueous solution of picric acid (NO ₂) ₃ C ₆ H ₂ OH								
Lubricant oil, unrefined									Propane, C ₃ H ₈								
Lubricant oil, refined									Stearic acid, C ₁₇ H ₃₅ COOH								
Mineral oil									Carbon tetrachloride, CCl ₄								
Castor oil									Solvents based on chlorine, dry								
Crude oil, at temp. below 260°C									Solvents based on chlorine, wet								
Crude oil, at temp. between 260°C and 535°C									Trichloroethylene, C ₂ HCl ₃								
Crude oil, at temp. over 535°C									Nickel chloride, NiCl ₂								
Tar									Sodium bicarbonate, Na ₂ CO ₃								
Turpentine									Hydrogen peroxide, H ₂ O ₂								
Water, H ₂ O distilled									Mercury chloride, HgCl ₂								
Sea water, H ₂ O									Sulphurous acid, H ₂ SO ₃								
Mineral water, H ₂ O with oxidizingsalts									Sulphuric acid, H ₂ SO ₄								
Mineral water, H ₂ O without oxidizing salts									- cold, with concentr. up to 10%								
Drinking water, H ₂ O									- hot, with concentr. up to 10%								
									- cold, concentr. 10-75%								
									- hot, concentr. 10-75%								
									- cold, concentr. 75-95%								
									- hot, concentr. 75-95%								
									- steam concentr. 75-95%								
									Hydrogen sulphide, H ₂ S, dry, cold								
									Hydrogen sulphide, H ₂ S, dry, hot								
									Hydrogen sulphide, H ₂ S, wet, cold								
									Hydrogen sulphide, H ₂ S, wet, hot

HOW TO SELECT AN INDUSTRIAL GASKET?

For any gasket application the choice of gasket material will depend on the operating conditions, mechanical features of the flanged assembly, the gasket characteristics and dimensions. In general, operating conditions determine the choice of jointing material, whereas the dimensional and mechanical features of the flange define the gasket type. The performance of any jointing material is influenced by the temperature, internal pressure, fluid, bolts (compressive stress), flange (type of flange, flange surface finish ...), cost-effectiveness and other special considerations.

DON PRO®

Bolt Properties		Gasket Properties	
Bolt size standard	ISO 724	Compressed outer gasket diameter	109.00 mm
Bolt size	M12	Compressed inner gasket diameter	27.00 mm
Number of bolts	4	Medium gasket diameter	68.00 mm
Width across flat	18	Gasket factor - m	1.5
Minimum diameter of bolt	10.86 mm	Minimum design seating stress - y	25.0 MPa
Thread pitch	2 mm	Gasket compressed area	7,470.71 mm ²
Friction angle	0.1712036 rad	Gasket internal area	2,421.29 mm ²
Coil angle	0.0912340 rad	Actual stress in bolt	636.39 MPa
Friction radius of nut	15.00 mm	Min required force in bolt	45,522.33 N
Max allowed tensile stress in bolt	210 MPa	Min required torque - gasket	114.28 Nm
Minimum bolt area	76 mm ²	Min required gasket surface stress	25.98 MPa
Max allowed force - bolt	16,393.26 N		
Max allowed torque - bolt	38.61 Nm		

The DON PRO® software represents a successful tool for proper choice of gasket materials and gaskets connected with major sealing problems of the static sealing area. The software includes a large number of flange and bolts dimensions according to different standards. The influence of internal pressure and temperature of the media on the gasket and bolts are checked as well as the chemical resistance of the gasket material against the media. Another possibility offered by the software is the optimization of the joint regarding the type of the selected sealing material or the gasket thickness.

CONSULTING AND SUPPORT

Bespoke gasket calculation software DON PRO® takes into account all of the gasket selection factors connected to the major sealing problems of static sealing areas and enables us to make the perfect recommendation:

- calculations take into account the influence of internal pressure and temperature on the gasket and bolts,
- calculations about the chemical resistance of the gasket material,
- optimizations of the joint regarding the type of selected sealant material and/or the gasket thickness.

GASKET INSTALLATION PROCEDURES

HOW TO INSTALL AND USE GASKETS IN THE FIELD?

Successful sealing of a flanged connection depends upon many elements of a well-designed flanged system working well together. Here is a summary, which should serve as a guideline for maintenance operators, engineers, and fitters in order to ensure successful gasket installation and assembly of bolted flange connections.

TOOLS REQUIRED

Special tools are required for cleaning and tensioning the fasteners. In addition, always use standard safety equipment and follow good safety practice. Prepare the following equipment prior to installation:

- calibrated torque wrench, hydraulic or other tensioner,
- wire brush,
- lubricant,
- helmet and safety goggles,
- other plant-specified equipment.

1. Clean and examine

Remove all particles and debris from seating surfaces, fasteners (bolts or studs), nuts, and washers. Use plant-specified dust control procedures. Examine fasteners (bolts or studs), nuts, and washers for defects such as burrs or cracks. Examine flange surfaces for warping, radial scores, heavy tool marks, or anything prohibiting proper gasket seating. Replace components if found to be defective.

2. Align flanges

Align flange faces and bolt holes without using excessive force. Report any misalignment.

3. Install gasket

Verify if the gasket is of the specified size and material. Carefully insert gaskets between the flanges. Make sure the gasket is centred between the flanges. Do not use "jointing compounds", graphite, grease or release agents on the gasket or seating surfaces. Bring flanges together, ensuring the gasket isn't pinched or damaged.

4. Lubricate load-bearing surfaces

Use only specified or approved lubricants. Liberally apply lubricant uniformly to all thread, nut, and washer load-bearing surfaces. Ensure lubricant doesn't contaminate either flange or gasket face.

GASKET INSTALLATION PROCEDURES

5. Install and tighten bolts

Always use proper tools: calibrated torque wrench or other controlled-tensioning device.

Consult our Technical expert or use the Gasket calculation software DON for guidance on torque specification.

Always torque nuts in a cross bolt-tightening pattern. Tighten the nuts in multiple steps:

- step-1 Tighten all nuts initially by hand.
(Larger bolts may require a small hand wrench.)
- step-2 Torque each nut to approximately 40% of full torque.
- step-3 Torque the nuts to approximately 70% of full torque.
- step-4 Torque each nut to full torque, again using the cross bolt-tightening pattern. (Large-diameter flanges may require additional tightening passes.)
- step-5 Apply at least one final full torque to all nuts in a clock-wise direction until all torque is uniform.
(Large-diameter flanges may require additional tightening passes.)

6. Retightening

Do not retorque elastomer-based, asbestos free gaskets after they have been exposed to elevated temperatures unless otherwise specified. Retorque fasteners exposed to aggressive thermal cycling. All retorquing should be performed at ambient temperature and atmospheric pressure.

STORING GASKETS

Industrial gaskets consist of various materials, which are subjected to ageing, weathering, oxidation ... Ageing causes decreasing of the mechanical properties of gaskets. For this reason storage under the following conditions is recommended:

- ambient temperature of storage - move away from heaters,
- dark storage room - move away from direct sunlight,
- dry atmosphere,
- avoid areas where electric discharge appears - ozone production,
- gaskets must lie horizontally - avoid hanging on hooks or folding which could cause cracking.

Avoid storing gaskets for more than two years.

CUSTOMERS SERVICE - TECHNICAL SUPPORT

Our team is always available to our customers for any assistance they might need, including advice on the selection and use of our sealing products. This is provided by a special team of highly skilled experts making up the Application Engineering department. By passing on their comprehensive knowledge of our products, the Application Engineering experts can help you solve practically any sealing problem. If you need our help or advice, please do not hesitate to contact us.

FROM REQUIREMENTS TO A FINISHED COMPONENT

A SINGLE CONTACT FOR THE COMPLETE DELIVERY SCOPE

01

REQUIREMENTS

Drawing, model, material, quantity and operating conditions.

02

TECHNICAL REVIEW

Selection of the gasket type, material and manufacturing route.

03

PRODUCTION

Cutting, machining and coordinated external operations as agreed.

04

INSPECTION

Dimensional verification and agreed documentation before delivery.

Send a PDF or DXF drawing, a STEP model or complete dimensional documentation for quotation.

The maximum pressure and temperature values shown in this catalogue are guidance values and must not be applied simultaneously. Product selection depends on the medium, flange design, surface pressure, installation conditions and other application-specific factors. Final suitability must be confirmed for the actual operating conditions.
